The private sewer system at 1600 165th St. Manchester IA in Delaware County consists of approximately a 1000 gallon, two compartment concrete tank in good condition, with the riser up to ground level.

The secondary treatment system consists of a rock and pipe approximate 100 feet from tank. I did a hyd. test on the secondary system and at the time of inspection it passed. Some improvements could be made by adding some dirt to the top of the field or a small brume to divert the ground water from the yard and the parking area away from the secondary system.
